

Revolutionizing Business Insurance: A Tech-Driven Approach to Cyber Resilience and Seamless Policy Management

The client stands out as an innovative business insurance solution specifically tailored for payroll and HR providers to address this pressing challenge. They actively facilitate collaboration among payroll and HR providers, brokers, small and medium-sized businesses, and carriers

streamlining the insurance policy creation process.

The primary goal is to harness technology to foster connections among individuals, empowering them to make informed, data-driven decisions and simplifying the business insurance process for increased efficiency and transparency.

The complexities and sluggishness associated with the procurement, sale, and management of business insurance create an impression of being stuck in outdated practices reminiscent of the 20th century. Approximately \$100 billion is injected into the market annually using outdated processes and low-tech solutions. However, without the incorporation of efficiency and automation, productivity suffers, resulting in friction and delays. Therefore, the objective is to offer technological solutions that can minimize friction, enhance customer satisfaction, and improve organizational productivity.

The Challenges

As technology becomes increasingly integrated into daily operations, small and medium-sized businesses (SMBs) are emerging as prime targets for cyberattacks. These attacks can lead to significant financial losses, damage to reputation, and disruptions in operations. An estimated 60% of SMBs in the U.S. that fall victim to cyberattacks go out of business within six months.

Idea is to partner with insurance carriers and provide an online frictionless solution which can support in following activities to make insurance reachable for everyone anywhere quickly:

- Sell Cyber Insurance to SMBs online
- Streamlined process with no complex underwriting questions

- Transparent pricing with no hidden premiums
- Seamless process from quote to policy binding
- Clear and concise post-bind activities

Quarks Solution

We are creating a comprehensive solution that encompasses the following functionalities: policy issuance, policy management, claims management, agency and producer management, billing and accounting, document management, user management, 3rd party integrations, reporting & analytics, and scalability. The solution is constructed using microservices, offering the flexibility for use by Cyber MGA and allowing other platforms to seamlessly integrate and leverage API operations.

The Benefits

- Simplified Application: Out-of-the-box integration with third party applications
- Fast Underwriting Decisions: Get approval in seconds
- Easy Insurance Management: An intuitive policy management system to manage your policies
- Improvement in customer loyalty: Increase customer loyalty by offering another value-added service.
